

# WATER & AQUATIC ENVIRONMENT CHARTER

Being eco responsible is crystal clear

## The Eiffage objective: preserve water resources and wetlands

### How?

- Measure, follow and reduce the pressures on water resources: collection, use, waste.
- Avoid the impact on wetlands and be vigilant to the water pollution risks.
- Reinforce the homogeneity of our good practices.
- Include the local restrictions and adapt to them.

### 1 Control water consumption

- Sensitize and train the employees to water conservation issues.
- Reduce the water consumption measures and improve procedures and techniques for water management.
- Promote water recycling and rain water collection.
- Use more efficient materials and techniques and promote them within the Eiffage commercial offer.

### 2 Inform and limit damage risks to resources and aquatic environments

- Systemize the temporary sanitation of sites via effective and adapted systems.
- Ensure the permanent structures good performance in water treatment.
- Identify and protect wetlands on our sites.
- Emphasize the application of reduced impact procedures on the water resources and minimize the use of crop protection agents.
- Design and realize projects respecting the green and blue infrastructures.

### 3 Innovate and promote our good practices from our offers to our sites

- Value initiatives and feedback for the best internal practices.
- Financially support innovation related to new products, processes or methods more respectful for water resource.
- Integrate alternative innovating solutions in the commercial offer.
